Notes

*Lamborghini Gallardo LP560-4 that run on VW/Audi electronics offer a similar module selection to the Audi R8, including the 5.2FSI V10 engine.

**VAD's OBD-II module will offer emissions-related data, featuring live and freeze frame data, and faults from the engine and transmission only.

***The newest Lamborghini cars have not been tested with the VAD tools. Even though these cars have some Audi electronics, the degree of compatibility is not yet known.
